

AUTONOMOUS EXPLOIT-TO PATCH SECURITY

The first AI platform that doesn't just find vulnerabilities. It proves them, patches them, and verifies the fix— on its own.

**BUILT FOR THE MACHINE-SPEED
ERA OF SOFTWARE.**

01

WHAT ACTUALLY HAPPENS WHEN YOU RUN POINTBLANK.AI

INPUT:

Web app / API / AI system

OUTPUT:

17 real exploitable vulnerabilities

12 auto-patched

5 flagged for approval

100% verified closure

This alone increases conversions massively

O2 // THE NEW REALITY

AI NOW WRITES CODE AT A SPEED NO HUMAN TEAM CAN MATCH.

Every enterprise is shipping faster than ever. Copilots, agents, and AI-native products are pushing code into production around the clock.

The attack surface is expanding by the hour.

The attackers are already automated.

Your defenders are not.

**IF AI IS WRITING CODE AT MACHINE SPEED,
SECURITY HAS TO RUN AT MACHINE SPEED TOO.**

Anything slower is a liability with a deadline

O3 // THE PROBLEM NOBODY HAS SOLVED

SECURITY TODAY IS A PILE OF HALF-ANSWERS.

Scanners flag "possible" issues — and flood teams with noise.
Pentests are expensive, rare, and out of date the moment they end.
AI copilots can suggest fixes, but can't prove they actually work.
Reports pile up. Tickets pile up. Risk piles up.

THE HARD QUESTIONS STILL GO UNANSWERED:

*Is this vulnerability real? Can it actually be exploited? How bad is it?
What's the safest fix? Did the fix actually close*

**UNTIL THOSE QUESTIONS ARE ANSWERED
AUTOMATICALLY, SECURITY IS THEATRE.**

O4 // INTRODUCING

POINTBLANK.AI IS AN AUTONOMOUS AI SECURITY PLATFORM THAT TAKES VULNERABILITIES FROM DISCOVERY, TO PROOF, TO PATCH, TO CONFIRMATION — WITHOUT HUMAN BOTTLENECKS.

Not a scanner.

Not a copilot.

Not a dashboard.

A full, closed-loop security operator that works continuously across your code, your running applications, and your AI-enabled products. the hole?

ONE PLATFORM. ONE LOOP. ONE VERIFIED OUTCOME.

O5 // THE CLOSED LOOP

**EVERY OTHER TOOL STOPS
SOMEWHERE IN THE MIDDLE.
WE COMPLETE THE CIRCUIT.**

06 // WHY WE WIN

WHY POINTBLANK WINS

Only platform that **proves exploitability**

Only platform that **patches root cause**

Only platform that **verifies closure**

07 // HOW IT WORKS (WITHOUT THE JARGON)

A FULL SECURITY TEAM, COMPRESSED INTO A SINGLE AUTONOMOUS SYSTEM.

PointBlank.ai is built around a **Director intelligence** that runs strategy at the top. Beneath it, a coordinated fleet of specialized agents executes the craft — each one purpose-built for a different layer of the modern attack surface.

Together, they handle reconnaissance, deep surface mapping, logic-level analysis, adversarial simulation, evidence validation, and remediation orchestration — all under one unified command.

IT DOESN'T JUST SCAN. IT OPERATES.

Think of it as an autonomous blue team that never sleeps, never skips a run, and gets sharper with every engagement.

The specifics of how each agent thinks, attacks, and coordinates are the core of our technology — and they stay behind the curtain where they belong.

08 // THREE WAYS TO DEPLOY

POINTBLANK.AI MEETS YOU WHERE YOUR PRODUCT LIVES.

WEB-ONLY

Assess a live application or API, even with zero source code access.

SOURCE + WEB

Combine code analysis with live runtime behavior for the deepest possible coverage.

SOURCE-ONLY

Analyze the codebase directly and drive findings straight to verified remediation.

One platform. Every engagement model. Full coverage — whether you're protecting a legacy product, a new SaaS launch, or an AI-native application.

O9 // WHY THIS CHANGES THE GAME

TRADITIONAL TOOLS GIVE YOU ALERTS. POINTBLANK.AI GIVES YOU OUTCOMES.

THE OLD WAY	THE POINTBLANK.AI WAY
Noisy scan reports	Verified, exploit-backed findings
Manual pentest cycles	Continuous autonomous operation
Patch-and-pray	Patch-and-proof
Fragmented tools	One closed loop
Static snapshots	Persistent memory, every run smarter

THIS ISN'T AN INCREMENTAL UPGRADE. IT'S A CATEGORY SHIFT.

IO // BUILT FOR THE AI-NATIVE ENTERPRISE

YOUR PRODUCTS RUN ON AI. YOUR SECURITY SHOULD TOO.

Your products now include LLMs, agents, retrieval systems, and AI-driven workflows. Traditional security was never designed to test any of this.

POINTBLANK.AI IS.

It actively probes the full **AI attack surface** — the new class of risks that conventional tools don't even recognize, let alone defend against. From model-layer manipulation to data-path integrity to agent-behavior exploitation, our platform tests where attackers are already moving, not where last year's tools are still looking.

IF YOU'RE SHIPPING AI, YOU NEED SECURITY THAT WAS BUILT FOR AI. THIS IS IT.

Our methodology for AI-surface testing is proprietary — and it's one of the reasons enterprises choose us over legacy vendors playing catch-up.

II // THE MENA OPPORTUNITY

THE REGION IS MOVING FAST. THE DEFENSES ARE NOT.

Vision 2030. National AI strategies. Sovereign cloud ambitions. A massive push into digital banking, fintech, e-government, and AI-powered services.

The software is being built now.

The attack surface is being built now.

The security infrastructure to protect it is not.

WHOEVER ARMS MENA'S SOFTWARE LEADERS WITH AUTONOMOUS, AI-SPEED SECURITY FIRST, WINS THE DECADE.

PointBlank.ai is that platform. **Built for this moment. Deployed for this region.**

12 // WHAT YOU ACTUALLY GET

FOR EVERY ENTERPRISE RUNNING POINTBLANK.AI:

Broader coverage across code and runtime — nothing hides.

Fewer false positives — every finding carries proof.

Exploit-backed confidence — you know what matters, not just what moved.

Root-cause patches — not cosmetic fixes.

Verified closure — the loop only ends when the vulnerability is actually gone.

Persistent intelligence — every run makes the next one sharper.

SOC2 / ISO ready

API integrations (GitHub, CI/CD, AWS)

Role-based approvals

Audit logs

**YOUR SECURITY POSTURE STOPS BEING A SNAPSHOT.
IT BECOMES A LIVING DEFENSE.**

13 // THE FIRST-MOVER ADVANTAGE

AI WRITES CODE AT SPEEDS HUMANS CAN'T MATCH. SECURITY MUST DO THE SAME.

The enterprises that adopt autonomous security first won't just be safer. They'll ship faster. Sell faster. Close deals faster. Win trust faster.

SECURITY IS NO LONGER A TAX ON VELOCITY. WITH POINTBLANK.AI, IT'S THE ENGINE BEHIND IT.

The companies that move first on this become the market leaders of the next decade. The ones that wait become case studies.

14 // WHY NOW. WHY POINTBLANK.AI.

BECAUSE THE ALTERNATIVES DON'T CLOSE THE LOOP.

Because noise doesn't stop breaches — **proof** does.

Because AI-written code needs AI-speed defense.

Because your customers, regulators, and board will not accept *"we're working on it."*

**POINTBLANK.AI ISN'T
THE SAFE CHOICE.**

IT'S THE *Serious* CHOICE.

15 // THE CLOSE

WE'RE NOT SELLING A TOOL. WE'RE OFFERING A CATEGORY LEAD.

A small number of enterprises in MENA will define what modern, autonomous, AI-native security looks like — and set the standard everyone else follows.

WE'RE CHOOSING THOSE PARTNERS NOW.

THE QUESTION ISN'T WHETHER AUTONOMOUS SECURITY IS COMING.

IT'S WHETHER YOU *Lead it* OR INHERIT IT.

LEAD IT OR INHERIT IT

Run your first autonomous security cycle in 24 hours
